IDENTIFIERS Federal State Program of Vocational Rehabilitation

ABSTRACT

Six pages of text highlighting the Federal-State Program of Vocational Rehabilitation for disabled persons in the fiscal years of 1967-71 accompany 32 tables of statistical data. The publication furnishes answers related to the personal and program-associated characteristics of persons rehabilitated under the program. Information for individual States and agencies is shown for fiscal year 1971. Vocational rehabilitation agencies in 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, and Guam furnished the data which were collected on a basic report form; since three different versions of the form were used during the five-year period, the data, in some instances, either are not entirely comparable from year to year or else are not available for each year. National information is shown for fiscal year 1971 and, wherever possible, for the preceding four years. The State data book, customarily issued following this publication, will not be published for fiscal year 1971; instead, many of the characteristic items are included in this document, including the State Fanking table. By request, information is shown for agencies for the blind. (Author/AJ)

INTRODUCTION

rehabilitations increased by over 100,000 from 173,594 to 291,272. It is also interesting to note that the has been particularly pronounced in recent years. For instance, nearly forty percent of the overall three since its inception in 1920. During its span of more than 50 years, the Program has changed substantially in its philosophy, focus, scope, and operation. These changes have enabled the Program to provide better and more comprehensive vocational rehatilitation services to increased numbers of persons who are victims The Federal-State Program of Vocational Rehabilitation has contributed toward the attainment of more promillion rehabilitations effected by the Program have been accomplished during the five years covered by of physical or mental disabilities which constitute a barrier to employment. The growth of the Program the current report, Fiscal Years 1967 through 1971. During this five-year period the annual number of ductive and meaningful lives for more than three million disabled persons who have been rehabilitated 291,272 clients rehabilitated in 1971 represented about 10 percent of the rehabilitations since 1920.

Puerto Rico, the Virgin Islands, and Guam furnished the data which were collected on the basic report form, five-year period, the data, in some instances, either are not entirely comparable from year to year or else This publication furnishes answers to questions relating to the personal and program-associated characterand, wherever possible, for the preceding four years. Information for individual States and agencies is Case Service Report, Form SRS-RSA-300. Since three different versions of the form were used during the shown for Fiscal Year 1971. Vocational rehabilitation agencies in 50 States, the District of Columbia, istics of persons rehabilitated under the Program. National information is shown for Fiscal Year 1971 are not available for each year.

Although the absolute numbers are understated to a greater degree for Fiscal Year 1971 than for prior years, clients -- 90.6 percent of the total of 291,272 clients. This unusually low level of coverage resulted from numerous problems associated with processing and non-receipt of information from State agencies. Coverage for Fiscal Years 1967 to 1970, inclusive, ranged from 97 to 99 percent of all rehabilitations. Fiscal Year 1971 National information was obtained from a computer tabulation of 263,946 rehabilitated the percentages are reasonably reliable and should prove useful for the purpose of delineating trends.

States in also shown for agencies for the blind. In addition the State ranking table from the State Data expanded State tables beginning on page 36. In response to various requests, the information shown for Fiscal Year 1971. Instead, many of the characteristics items from the State Data Book are included in The State Data Book, which customarily is issued following this publication, will not be published for Book is included beginning on page 32.

All references to given years relate to fiscal years ending June 30.

Additional copies of this report, as well as more detailed information on the characteristics of rehabilitated clients, may be obtained upon request from the Division of Monitoring and Frogram Analysis, Statistical Analysis and Systems Branch, Rehabilitation Services Administration, Washington, D. C. 20201.

EXPLANATION OF TERMS

PROGRAM HIGHLIGHTS

Age at referral . . .

The mean age of clients rehabilitated in 1971 was 33 years -- one year younger than clients rehabili-The representation of persons under 35 years of age among all tated during the four preceding years. The representation of persons under 35 years of rehabilitated clients increased from 54 percent in 1967 and 1968 to 57 percent in 1971.

low of 3 percent in Oregon to a high of 48 percent in Indiana. The mean age was less than 30 years Individual States displayed a considerable amount of variation in the proportion of younger clients among all rehabilitated clients. The percentage of clients less than 20 years of age ranged from a in 7 States. (Table 20C)

In recent years there has been virtually no change in the proportion of females among all rchabilitated The percentage of females stayed around the 44 percent mark from 1968 to 1971. clients.

Although white clients outnumbered clients of minority races 4 to 1 during the five-year period, there have been some slight gains in the proportion of minority group clients. (Table 3) have been some slight gains in the proportion of minority group clients.

Spanish surname . . . Roughly five percent of all clients rehabilitated in 1971 had Spanish surnames. (Table 3)

Highest grade of school completed . . .

Over half of the clients rehabilitated during 1971 and the preceding years had dropped out of school before finishing high school. Since 1967, the percentage of clients with some education above the high school level rose from 7 percent to 9 percent in 1971. (Table 3, Fig. C) The mean number of grades completed was lower than the National average of 9.9 grades in 15 States.

Number of dependents . . .

18 percent in 1971. Consequently, the average number of dependents per client with dependents decreased Fiscal Year 1971 marked the second consecutive year in which the proportion of clients without dependents exceeded 60 percent. Clients with three or more dependents dipped from 21 percent in 1967 to (Table 4) from 3.0 to 2.8 during the five-year period.

FIGURE B. AGE AT REFERRAL OF PERSONS REHABILITATED BY STATE VOCATIONAL REHABILITATION AGENCIES IN FISCAL YEAR 1971

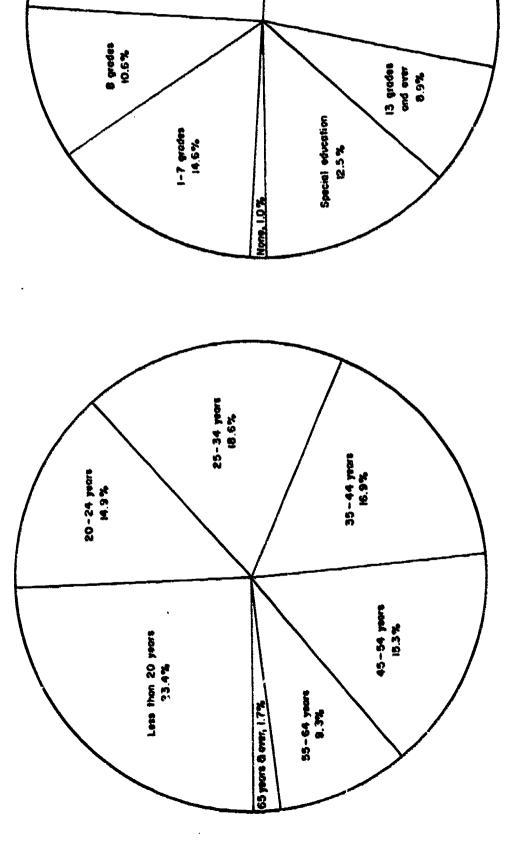

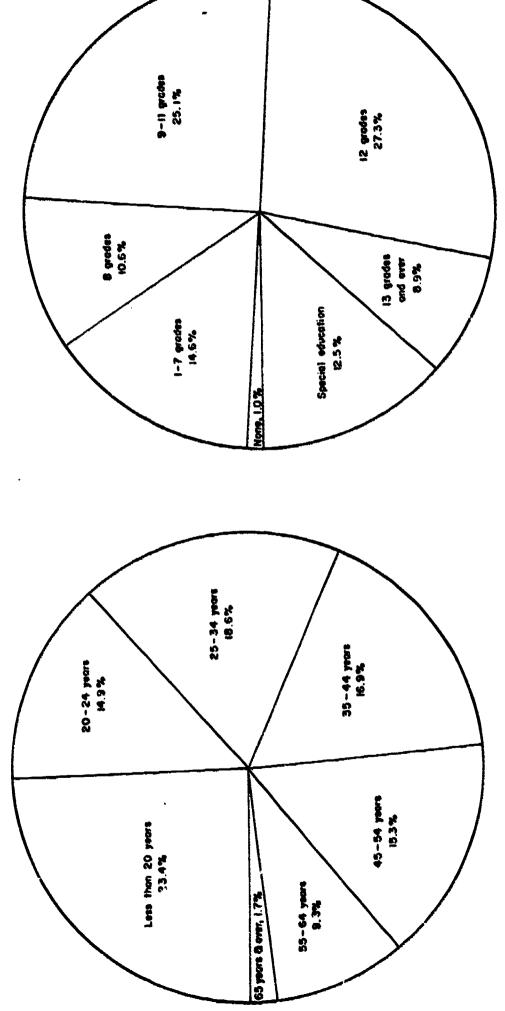

FIGURE C. HIGHEST GRADE OF SCHOOL COMPLETED BY STATE VOCATIONAL REHABILITATION AGENCIES BY PERSONS REHABILITATED IN FISCAL YEAR 1971

By State, the proportions of clients with dependents were quite disparate accounting for slightly more than half (52 percent) of the rehabilitated clients in California as contrasted to only 17 (Table 20C) percent of the clients in Hawaii.

Number in family . . .

Four out of every five clients were members of families of 2 or more persons. Nearly one-third were from families consisting of five or more persons. (Table 4) The average number of persons in the families of rehabilitated clients was 3.6 for 1970 and 1971.

Puerto Rico with a mean family size of nearly 5 (4.8) persons was the State registering the largest average family size. (Table 20D)

Only 10 percent of the clients rehabilitated during 1971 reported monthly family income in excess of \$600. The median Monthly family income . . . The family income for fully 35 percent of the clients rehabilitated during 1970 and 1971 amounted to monthly family income at referral of all rehabilitated clients amounted to \$231. (Table 4, Fig. D) less than \$150 per month at the time they entered the vocational rehabilitation process.

with the highest proportions of such low family income clients in 1971 were Puerto Rico, Alabama, and the District of Columbia where the percentages registered more than 80 percent. On the other hand, clients with monthly family incomes less than \$300 accounted for only 27 percent of the clients in Nationally, monthly family income of less than \$300 was reported by 62 percent of the clients. (Table 20C) Indiana.

Marital status . . .

Since 1967, the relative number of married clients rehabilitated has decreased while the number (Table 4) divorced or separated has increased.

Major disabling condition .

The mental illness category displayed the most significant relative growth during the five-year period. The proportion of mentally or emotionally ill clients rose by two-thirds, from 16 percent in 1967 to 27 percent in 1971. The two sub-categories mainly responsible for this growth were other character, personality and behavior disorders and alcoholism.

Since 1967 the rapid growth of the mental illness category has cut into the representation of the orthopedically impaired and has reduced their proportion of the total to 17 percent in 1971. Some other disability categories which have declined proportionately In 1967, the largest single disability category was orthopedic impairments which accounted for 21 in recent years are blindness, deafness, amputations, heart disease, tuberculosis, and digestive percent of all rehabilitated clients. (Table 5, Fig. E) system disorders.

BY MENTAL ILLNESS AND ORTHOPEDIC IMPAIRMENTS BY STATE VOCATIONAL REHABILITATION AGENCIES 1971 AS A PERCENT OF ALL PERSONS REHABILITATED Orthopedic impoirments IN FISCAL YEARS 1967-1971 1969 Mental illness 1968 Percent of all rehabilitations 1961 0 100 5 9 S 20 30 25 35 \$150 - \$249 18.4% \$250-\$349 15.7% IN FISCAL YEAR 1971 \$350-\$449 11.6% . **50- 514**9 35.4% \$450-\$599 8.9% \$500 and over 10.1%

Fiscal years

In three jurisdictions -- the District of Columbia, North Dakota, and Utah -- mentally ill clients constituted more than half of the total group of rehabilitated clients as compared to 27 percent nationally. At the other end of the scale, less than 10 percent of the rehabilitated clients in Idaho, Indiana, and Mississippi were in the mentally ill category.

Digestive system disorders disabled roughly one-fourth of the clients rehabilitated in Illinois, Oklahoma, and West Virginia, as opposed to less than 10 percent nationally. (Tables 20 A and B)

Cost of case services by disability . . .

average costs in excess of \$1,000 whereas in 1967 the highest average cost was \$947 for blind clients. The seven high-cost disabilities in 1971 were 1) blindness; 2) orthopedic impairments involving three Inflationary trends in the economy were reflected in the cost of case services provided to disabled clients by State agencies. From 1967 to 1971, the average cost of such services rose from \$554 to 4) absence or amputation of both upper extremities; 5) absence or amputation of at least one upper \$742 -- an increase of 34 percent. In 1971 there were seven disabling conditions associated with The lowest average or more limbs or body; 3) orthopedic impairments involving one upper and one lower extremity; and one lower extremity; 6) mental retardation, severe; and 7) heart disease. expenditure (\$377) was for conditions of the teeth and supporting structures.

Primary cause of disabilities . . . Visual and hearing defects were generally caused by disease, while amputations and orthopedic impair-(Table 7) ments were more likely to be caused by accidents and injuries.

Public assistance . . .

One of every seven persons rehabilitated during 1971 was a public assistance recipient at some time during the rehabilitation process.

from 1967-1969, but there was a slight upturn in 1970. In 1971 this upward trend continued and clients receiving public assistance at referral climbed back to the 1967 level, accounting for 12 percent of The proportion of clients receiving public assistance payments at referral displayed some slippage all rehabilitated clients.

40 percent. The same trend was apparent in terms of monthly public assistance payments. In 1967 there assistance at the time of case closure. For example, in 1967 the public assistance recipients at closure were 53 percent fewer than at referral. In 1971 the proportionate decrease amounted to only In recent years there has been a tendency for increased numbers of clients to remain on public was a decrease of 60 percent in these payments while the 1971 decrease was only 42 percent.

FIGURE G. SOURCE OF REFERRAL
OF PERSONS REHABILITATED
BY STATE VOCATIONAL REHABILITATION AGENCIES
IN FISCAL YEAR 1971

The savings in monthly public assistance payments for clients rehabilitated in 1971 amounted to \$1.8 million or \$22 million annually. Nearly one-third of the public assistance clients rehabilitated in 1971 had been receiving payments less than six months at the time they entered the vocational rehabilitation process. One of every six (17 percent) had been recipients for more than 5 years. (Table 8, Fig. F)

State, from 27 percent of all rehabilitated clients in Washington down to 4 percent in South Carolina. Clients receiving public assistance at referral accounted for at least one-fifth of all rehabilitated In 1971, the representation of clients on public assistance rolls at the time of referral ranged, by clients in 8 States. (Table 20E)

Source of referral . . .

The percentage of such referrals rose from one percent in 1967 to six percent The number of rehabilitated clients referred by correctional institutions showed a marked increase individuals (including physicians) or had sought vocational rehabilitation services on their own. Roughly one-third of all clients rehabilitated during the five-year period had been referred by in 1971. (Table 9, Fig. G) over the five years.

Previous rehabilitation experience . . .

Less than 10 percent of the clients rehabilitated during 1970 and 1971 had been closed from the active (Table 10) rehabilitation process within the three years prior to their latest referral.

clients with public assistance as their main source of support declined from 1967 to 1970, but showed The proportion of Since 1967, there has been steady families and friends. Roughly one of every five clients relied chiefly on their own earnings for Primary source of support . . . At the time of their referral, rehabilitated clients were most likely to have been supported by growth in the number of clients confined to and supported by public institutions. support. This pattern was constant throughout the five years. a slight increase in 1971. (Table 11)

New Hampshire, South Dakota, and Wyoming -- over 20 percent of the clients rehabilitated in 1971 were primarily supported by public institutions. Nationally, such clients comprised 10 percent of It is interesting to note that in six States -- the District of Columbia, Maryland, Nebraska, (Table 20F) rehabilitations.

Social Security Disability Insurance Status . . . Since 1967, 10-11 percent of all rehabilitated clients were applicants for SSDI benefits at the time of their case closure. Typically, the majority of these applicants had been allowed benefits.

Proportions of recipients of SSDI benefits ranged from three percent of all rehabilitations in (Table 20F) Puerto Rico and Virginia to 15 percent in Hawaii.

three-fourths of the group at termination of the vocational rehabilitation process. In 1971, homemakers at closure reached their highest level of representation for the five-year period (16 percent). of referral to the time of case closure. As concerns 1971 rehabilitations, wage earners accounted for Work status . . . Expectedly, in each of the five years the number of wage earners increased dramatically from the time slightly less than one-fifth of all rehabilitated clients, at referral, but they constituted over (Table 13)

District of Columbia, and Oregon -- the corresponding increase was between 70 and 80 percentage points. Nationally, in 1971, the percentage of competitive labor market workers increased 56 percentage points from 19 percent at referral to 75 percent at closure. In four States -- Arizona, Colorado, the

Type of occupation at closure . . .

In 1971, as in the previous four years, roughly three out of every ten rehabilitated clients were placed into various levels of industrial occupations. The service category was the second largest grouping of ments since 1968. Conversely, the relative number of clients placed into professional, managerial and clients (22 percent in 1971), but there has been a slight but steady relative decrease in such placetechnical occupations increased from 9 percent in 1967 to 11 percent in 1971. (Table 14, Fig. H)

In Arizona, Idaho, Kansas and South Dakota the rate of rehabilitation into professional occupations was in excess of 20 percent -- well above the national rate of 11 percent.

Homemakers accounted for at least one-fourth of the rehabilitated clients in Mississippi, Oklahoma, (Table 206) Rhode Island and West Virginia.

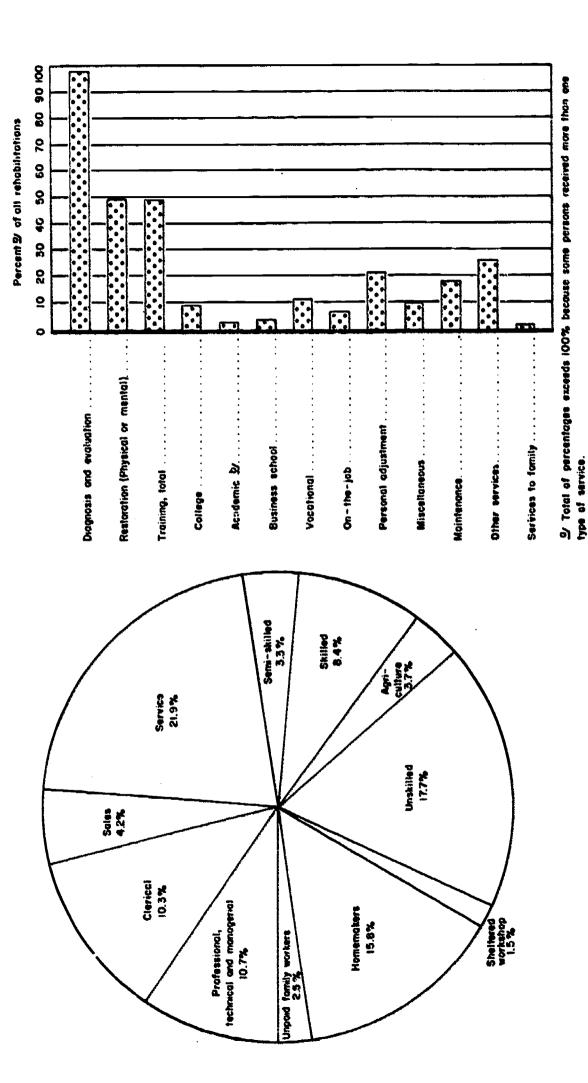

FIGURE H. TYPE OF OCCUPATION

AT CLOSURE FOR PERSONS REHABILITATED

BY STATE VOCATIONAL REHABILITATION AGENCIES
TO PERSONS REHABILITATED IN FISCAL YEAR 1971

D Elementary or high school.

of clients earning higher salaries. Clients earning more than \$100 per week doubled proportionately in the number of professional placements accounted, at least partially, for the growth in the number from 1967 (11 percent) to 1971 (22 percent). It is interesting to note that at the time of referral Neekly earnings . . . The level of weekly earnings of all clients rehabilitated in 1971 (including those with no earnings) The relatively high number of clients without earnings at closure in 1971 (18 percent) reflects the increased, on the average by \$50, rising from \$14 at referral to \$64 at the time of case closure. aforementioned increase in the proportion of clients rehabilitated as homemakers. The increase only four percent of the 1971 clients earned weekly salaries in excess of \$100. (Table 15)

Type and cost of case services . . .

1971 totaled \$179 million, an average of \$742 per client receiving services paid for by a State agency. restoration services and one-half received training during the vocational rehabilitation process. The 3) college or university. State agency expenditures for case services to clients rehabilitated during Approximately one-half of the clients rehabilitated during 1970 and 1971 received physical and mental most common types of training were 1) personal and vocational adjustment; 2) vocational school; and (Tables 16 and 17, Fig. I)

82 percent of the rehabilitated clients received training. This compares to 17 percent of the clients in Kentucky. The average cost of case services exceeded \$1,000 in 7 States (Alabama, Alaska, Arizona, agencies. Physical and mental restoration was provided to nearly 90 percent of the clients rehabilitated in 1971 in West Virginia as contrasted to only 14 percent of the clients in New York. In Utah The relative number of clients receiving specific types of case services varied widely among State Massachusetts, New Hampshire, New York and Wyoming). (Table 20G)

Length of time required for rehabilitation . . .

applicant statuses and averaged 15 months while in the active statuses. Clients receiving training as (from referral to closure) has increased from 17 months to 19 months in 1971. Clients rehabilitated part of their plan of services averaged 14 months in this particular phase of their rehabilitation. in 1971 spent slightly over one-fifth (4 months) of the 19 months in pre-acceptance i.e. referral-Since 1967, the average length of time required to complete the vocational rehabilitation process

Less than one year was required for the entire vocational rehabilitation process for clients rehabilitated in 1971 in the District of Columbia and Kentucky. This time was roughly tripled for clients in Puerto Rico where the average stay in the process was 34 months. (Table 20F) NATIONAL TABLES

A/ Certain States with relatively small proportions of rehabilitated Regro clients did not report race prior to 1970. Nerfore, the figures for 1970 are not fully comparable to those for previous years.

b/ Not evaluable.

c/ Special education for 1970 and 1971 includes all clients with mental retardation as a major or secondary disabiling condition regardless of their type of schooling or "equivalency" grade. From 1967-1969, regular grades were recorded for some mentally retarded clients. Thus, the figures for 1970 and 1971 are not completely comparable to those for the preceding years.

PROGRAM HIGHLIGHTS

EXPLANATION OF TERMS

- 1. Points of reference in the rehabilitation process:
- a. At referral--the date when an individual is officially placed in the referral load of a State vocational rehabilitation agency after applying or being referred for services. Before an individual is considered a referral, the following information must have been furnished: (1) name and address, (2) disability, (3) age and sex, (4) date of referral, and (5) source of referral.
- b. At acceptance—the date when an individual is officially placed in a State agency's active caseload after it has been determined that (1) a physical or mental disability is present; (2) a substantial handicap to employment exists; and (3) vocational rehabilitation services may reasonably be expected to render the individual fit to engage in a gainful occupation.
- c. At closure (rehabilitation)--the date of completion of the vocational rehabilitation process when an individual has (1) received appropriate diagnostic and related services; (2) had a plan for vocational rehabilitation services formulated; (3) completed the plan insofar as possible; (4) been provided counseling as an essential rehabilitation service; and (5) been determined to be suitably employed for a minimum of 30 days.
- d. In extended evaluation--the period of time which is used to provide services need-

- placed into 18-month extended evaluation. Clients with any other vices other than those required to assess d:sability paraplegia, quadriplegia, and other spinal cancer; stroke; epilepsy; mental illness; muscular dystrophy; cystic fibrosis; or redisability may be placed only in 6-month extended evaluation. While in extended evaluation, an individual may not receive sered to determine the rehabilitation potential is mental retardation; deafness; blindness; cord injuries or diseases; heart disease; brain damage; arthritis; of an individual. If a client's his rehabilitation possibilities. nal failure he may be cerebral palsy;
- 2. Age--recorded as of last birthday before referral for vocational rehabilitation services.
- 3. Case services -- any goods or services necessary to render a handlcapped individual fit to engage in a gainful occupation. The various types of services are as follows:
- a. Diagnostic and evaluation--medical, psychological, social, and vocational diagnostic and evaluation services authorized for determining eligibility or ascertaining the nature and scope of rehabilitation services needed.
- b. Restoration--medical and medically related services which are necessary to correct or substantially modify a physical or mertal condition.

c. Training--all training and training materials provided individual clients.

The various ypes of training are as follows:

- (1) College or university--all academic training on a level higher than a secondary education.
- (2) Other academic--academic training on a secondary education level or lower, as well as in specialized schools such as schools for the deaf or for the blind.
- (3) Business school or college-non-degree training in a business school of-fering courses in office skills.
- (4) Vocational school--training in a vocational, trade, or other technical school to prepare the client for an industrial occupation.
- (5) On-the-job--training in a program whereby the client usually works for wages while learning the skills of a job.
- ment--training which will help the client to adjust to a particular situation hindering his rehabilitation potential such as work conditioning; developing work tolerance; training in the use of artificial limbs, aids, or appliances; literacy training; lip reading; braille;
- (7) Miscellaneous-training which cannot be classified in any of the above

categories. BEST COPY NVAILABLE

- d. Maintenance--any service provided to cover basic living expenses so that the infindividual can derive the full benefit of other vocational rehabilitation services provided.
- e. Other services--services such as reader and interpreter services, occupational tools and equipment, initial stocks, licenses, and transportation. Also includes medical care for acute conditions which may arise during rehabilitation and constitute a hazard to the determination of rehabilitation potential or to the achievement of the vocational objective.
- f. Services to other family members-services provided to the family members of the handicapped individual for the purpose of contributing substantially to the rehabilitation of the handicapped individual.
- h. Dependents--recorded at time of referral. Persons for whom the referred individual, as recognized head of the household (usually, but not necessarily, the father or mother), has major responsibility for providing the basic essentials of daily living such as food, clothing, shelter, and education. The client's ability to meet this responsibility is not taken into consideration in recording this item.
- yeek prior to referral and prior to closure including total wages, salaries, tips and commissions received as regular income before payroll deductions (income tax--State and Federal, social security, union dues, etc.).

Full Text Provided by ERIC

Bernings also include profits from self-employment in a business or profession. Profits of farmers are not estimated.

- 6. Family--recorded at time of referral for vocational rehabilitation services. Those persons living in the same household who are related to one another by blood, marriage, or adoption. Friends and other lodgers are excluded. A client living alone or in an unrelated household is considered a family of "one".
- family income--recorded for the month preceding the date of referral. Includes family's (a) cash earnings from wage or salaried positions before payroll deductions; (b) cash income receipts from own business, farm, or profession, after deduction of operating expenses; (c) payments from public sources such as public assistance, unemployment insurance, workmen's compensation, veteran's benefits, social security, and pensions; and (d) other income such as pensions and annuities from private sources, net rental income, dividends, interest, etc.
- A. Major disabling condition-the defect, impairment, or disease most significantly responsible for the client's work limitation.
- 9. Occupation-the type of job or occupation in which the client was employed at the time his case was closed. With some exceptions (e.g., homemakers) the RSA occupational coding structure is based on the Dictionary of Occupational Titles, third edition, published in 1965 by the U.S. Department of Labor.
- 10. Primary cause of major disabiling condition—the disease, injury, or congenital condition which was the direct cause of the major disabiling condition.

- 11. Public assistance--money payments made to the client or his dependents (except for nursing home care) under the Federally-aided programs of Old-Age Assistance (OAA), Aid to the Blind (AB), Aid to the Permanently and Totally Disabled (APTD), Aid to Families with Dependent Children (AFDC), and State and/or locally financed General Assistance (GA).
- 12. Race--White, Megro, Indian, and other. This item is not reported by States or agencies where recording this information is contrary to law, regulation, or policy.
- 13. Social Security Disability Insurance benefits
 --monthly checks paid to (a) disabled workers
 under 65 and their families; (b) persons disabled in childhood (before 18) who continue
 to be disabled as adults and whose mother or
 father receive social security retirement or
 disability benefits or whose insured parent
 is dead; (c) disabled widows, disabled dependent widowers, and (under certain circumstances) disabled surviving divorced wives of
 workers who were insured at death.
- 14. Social Security Disability Insurance statusrecorded at the time of case closure. The SSDI categories are as frilows:
- finitely not to be applicants for SSDI benefits at the time of case closure.
- b. SSDI applicants--individuals who have applied for SSDI benefits.
- c. Applicants, allowed benefits -- clients who are receiving SSDI benefits.

- d. Applicants, denied benefits--individuals who have received notice by the time of case closure that their applications have been denied.
- e. Applicants, status of application pending --clients whose status had not been adjudicated at the time of case closure.
- f. Applicants, benefits discontinued or terminated--former beneficiaries whose benefits have either been discontinued or terminated and who have not reapplied by the time of case closure.
- 15. Source of referral -- the institution, organization, agency or individual that submitted the client's name to the State vocational rehabilitation agency.
- 16. Special education--encompasses all clients, with mental retardation as a major or aecondary disabling condition.
- 17. Spanish surname--based entirely on surname, even when it is known that a person with a Spanish surname is not of Latin American ancestry.
- 18. Work status--the client's work activity during the week prior to referral and prior to closure. The following are the work status categories:
- a. Wage or salaried worker--an individual who did any work at all for a private employer or for government (Federal, State, or local) for wages, salary, commission, tips, or piece rates.

- (1) Competitive labor market--work for wages, salary, commissions, etc., as defined above, but does not include work in sheltered workshops. Includes wage earners on farms but not sharecroppers or self-employed farmers.
- (2) Sheltered workshop--work for wages or salary as defined above in a workshop conducted by a nonprofit organization which provides work under special conditions for the physically or mentally handicapped.
- b. Self-employed--work for profit or fees in one's own business, farm, shop, or office. Includes State agency-managed business enterprises (BEP) which are vending stands and other small businesses for the severely disabled under the management and supervision of a State agency.
- c. Homemaker--a person (male or female) whose principal activity is keeping house for his (or her) family.
- d. Unpaid family worker--a person who works without pay on a family farm or in a family business operated by one or more members of his own family.
- e. Student--a person who is attending school and cannot be classified in one of the working categories.
- f. Trainee or worker (non-competitive labor market)--a person who, although he may have received stipends for work or services performed, was functioning essentially in a non-competitive environment. Mainly a person participating in work experience, work training, or work adjustment programs such as

those sponsored by the Office of Economic Opportunity, the Department of Labor, and the Department of Health, Education and Welfare.

g. Other--a person not in the categories above. Examples include (1) persons unable to get jobs; (2) persons not able to perform their homemaking duties; (3) persons confined in institutions, including places providing specialized medical care, homes for the aged, prisons and jails; and (4) persons receiving only pay "in-kind" (meals, lodging, etc.).
